

How to Use the Deneb Customization Guide

Welcome! This guide helps you customize your Deneb visual templates in Power BI with clarity and ease.

Step 1: Load the JSON File into Deneb

Import the file **"Deneb Power BI Starter Guide"** into Power BI using the Deneb visual. This file contains the base design for the chart you want to customize.

Step 2: Use the Customization Table

Use the following table (provided in the Word/PDF file) to find editable lines in the Deneb JSON code.

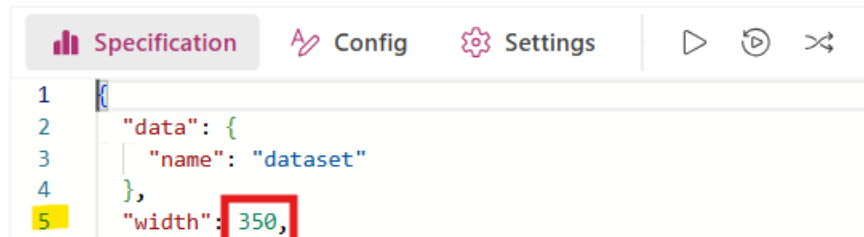

Line No	Field	Description	Example Value
5	width	Chart canvas width	350

Step 3: Customize with Caution

Open the Spec Editor inside the Deneb visual in Power BI, and navigate to the line number indicated in the table.

You can modify chart size, color gradients, tooltip fields, and more.

Example: Change the chart width from "width": 350 to "width": 500.

Important Notes

- All customizations must be done at your own risk.
- Improper changes may cause the visual not to render.
- Editing the JSON in Power BI does not affect the original downloaded file.
- If you encounter an error, return to Step 1 and reload the original file.
